CosmicArmor Application Security Data Sheet

Real-Time Cloud Security,Simplified

Overview

CosmicArmor Application Security provides a comprehensive suite of security testing tools designed to identify and mitigate vulnerabilities across your entire application portfolio. Our platform integrates Static Application Security Testing (SAST), Dynamic Application Security Testing (DAST), API Scanning, and Software Composition Analysis (SCA) to deliver a holistic approach to application security. CosmicArmor offers a more integrated and developer-centric approach, ensuring seamless security throughout the development lifecycle.

Why Wait? The Time to Act Is Now

If you're still using outdated security practices, you're already behind. Cloud environments evolve faster than ever, and traditional security methods just can't keep up. CosmicArmor is security automation at its finest, allowing you to focus on business growth without worrying about vulnerabilities. With CosmicArmor, you're not just defending your cloud—you're taking proactive, instant action to stop threats before they even have a chance to impact your business.

Ready to make your cloud unbreakable? Get in touch today. Let us show you how CosmicArmor can protect your cloud without compromise.

Key Features

Ready to make your cloud unbreakable?

Get in touch today. Let us show you how CloudShield can protect your cloud without compromise.

SAST

Analyze source code for vulnerabilities with industry leading accuracy.

DAST

Test running applications for security flaws using advanced simulation techniques.

API Scanning

Analyze source code for vulnerabilities with industry leading accuracy.

SCA

Manage open-source risks and vulnerabilities with real-time alerts and remediation guidance.

SAST (Static Application Security Testing)

Methodology

Analyzes source code for potential vulnerabilities without executing the code, providing deep insights into code-level flaws.

Vulnerabilities Detected

SQL injection, cross-site scripting (XSS), buffer overflows, and other code-level flaws, with higher precision .

Integration

Analyzes source code for potential vulnerabilities without executing the code, providing deep insights into code-level flaws.

Reporting

Detailed reports with vulnerability descriptions, severity levels, and remediation guidance, offering more actionable insights than competitors.

DAST (Dynamic Application Security Testing)

Methodology

Tests running applications by simulating real-world attacks to identify vulnerabilities, with more realistic scenarios .

Vulnerabilities Detected

Cross-site scripting (XSS), SQL injection, authentication flaws, and other runtime vulnerabilities, with fewer
false positives .

Integration

Integrates with web application firewalls (WAFs) and other security tools, providing a more cohesive security ecosystem than competitors.

Reporting

Comprehensive reports with vulnerability details, impact analysis, and steps to reproduce, offering clearer remediation

API Scanning

Methodology

Automated testing of APIs to ensure security and compliance with industry standards, covering a wider range of protocols .

Vulnerabilities Detected

Broken authentication, authorization flaws, data exposure, and other API-specific vulnerabilities, with more
accurate detection

Integration

Integrates with API gateways and management platforms, providing a more streamlined workflow than competitors.

Reporting

Detailed reports with vulnerability information, severity ratings, and remediation recommendations, offering more comprehensive guidance.

SCA (Software Composition Analysis)

Methodology

Identifies and manages open-source components and their associated vulnerabilities, with more up-to-date vulnerability data .

Vulnerabilities Detected

Known vulnerabilities in open-source libraries, license compliance issues, and outdated components, with more precise identification .

Integration

Integrates with build systems and dependency management tools, offering a more integrated approach than competitors

Reporting

Reports on vulnerable components, severity levels, and available updates or patches, providing clearer and
more actionable insights.

Benefits

Comprehensive Security

Cover all aspects of application security with integrated SAST, DAST, API Scanning, and SCA, providing a more holistic solution.

Comprehensive Security

Cover all aspects of application security with integrated SAST, DAST, API Scanning, and SCA, providing a more holistic solution.

Comprehensive Security

Cover all aspects of application security with integrated SAST, DAST, API Scanning, and SCA, providing a more holistic solution.

Our Current Location

Currently we are placed in:

India HQ

Plot No. 338, Phase 4, Udyog Vihar,
Sector 19 Gurugram – 122016

Expanding Horizons

We are expanding soon in these locations

CANADA

UAE

SINGAPORE
