CosmicArmor Application Security

Application Security, Reinvented for Cloud-Native Speed

Legacy AppSec and CloudSec tools often operate in silos—creating friction between development and security teams, increasing risk, and slowing down delivery. In the era of cloud-native development, that approach is no longer enough. Cosmic Armor delivers a modern, unified approach to application security—built to protect every stage of the software lifecycle, from code to cloud to runtime. By integrating preventive and proactive security measures directly into development workflows, Cosmic Armor helps teams detect, resolve, and prevent issues long before they become production threats.

With advanced scanning capabilities and an extensive library of built-in and customizable security policies, Cosmic Armor empowers security teams to block insecure builds, enforce compliance standards, and strengthen defenses—without disrupting innovation or velocity.

Bridge the Gap Between Dev and Security–Seamlessly

Cosmic Armor goes beyond traditional scanning. It enables complete Cloud-to-Code traceability, letting security teams automatically link runtime alerts back to the specific code changes, configurations, or repositories that introduced the risk. With AI-assisted fixes, auto-generated pull requests, and actionable insights, remediation becomes faster, smarter, and far more efficient. This drastically reduces Mean Time to Resolution (MTTR), enabling developers to focus on building while maintaining security at scale.

By aligning cloud security with development velocity, Cosmic Armor minimizes alert fatigue, improves cross-functional collaboration, and ensures every deployment is as secure as it is fast.

A Revolutionary Approach to AppSec for Modern Teams

Secure from Code to Cloud–All in One Platform

Integrated security as you code and build

Scan Git repositories, Infrastructure-as-Code (IaC) templates, container images, and other artifacts in real time to catch misconfigurations, vulnerabilities, secrets, and compliance risks before they ship.

Secure every deployment with confidence

Prevent insecure infrastructure from being configured or risky applications from being pushed to production. Enforce guardrails that work behind the scenes without slowing developers down.

Protect environments and applications at runtime

Continuously monitor your live cloud assets with intelligent alerts that map risks back to their source—enabling fast, precise, and effective remediation.

Unified Security for the Full Application Lifecycle

Today's cloud-native development demands security that doesn't slow you down. This solution offers organizations a single, integrated source of truth for identifying, preventing, and resolving risks—across every phase of the development lifecycle.

Developer Friendly

Surface security insights where your developers work—within the tools they use every day.

Deep Scanning and Smart Guardrails

Catch issues before they reach production. Our solution provides robust scanning for source code, container images, Infrastructure-as-Code (IaC), secrets, and more—paired with customizable policies that align to your unique environment. Stay protected without slowing development down.

End-to-End Code Security Coverage

Go beyond the basics with a complete suite of modern security capabilities. This includes SCM Posture Management, Software Composition Analysis (SCA), Static Application Security Testing (SAST), secrets detection, IaC scanning, and container image analysis—all in one platform.

Secure your applications from code to cloud
Address production risks at their source

Code-to-Cloud Visibility in Real Time

Bridge the gap between development and production. With Cloud-to-Dev traceability, security teams can pinpoint the origin of cloud alerts, remediate threats directly in code, and automate resolution with AI-generated fixes and one-click pull requests.

Our Current Location

Currently we are placed in:

India HQ

Plot No. 338, Phase 4, Udyog Vihar,
Sector 19 Gurugram – 122016

Expanding Horizons

We are expanding soon in these locations

CANADA

UAE

SINGAPORE

Secure from Code to Cloud—All in One Platform
